INSTITUTION PERSPECTIVE PLAN AND ITS DEPLOYMENT

Kashi IP intends to work with more universities across the nation and overseas over the upcoming years to help our students become more globally competent and to establish connections with renowned institutions for higher education and student placement. The institution is concentrating on adopting and putting into practice a number of quality procedures that will allow us to fulfil the criteria for accreditation by a number of organizations, including NAAC, ISO and NBA.

We plan to keep the current strategy, which includes presenting lectures from famous academic and industrial speaker expert that go beyond the syllabus topics. The sessions will help students to make decisions about their career paths during graduation. Soft skill development lectures, which are incorporated into the placement activities, will assist students in developing their personalities. All of these measures working together will result in better student placement.

One of the Kashi IP goals is to solicit feedback from previous participants in order to bridge the gap between industry and academia. Alumni are asked to offer guest lectures and share their experiences with students on the unique platform. Collaboration for R&D, innovation, and intellectual property rights (IPR) with national and international organizations.

We are working hard to enhance research funding. Important research will be published in reputed journals with a high impact factor. Collaborations between industries for research will help Kashi IP to develop stronger institution industry contact. Apart from that institute plans to raise awareness about IPR.
